General introduction	xxvii

Part 1 Radiation and scattering of acoustic waves in fluids

1 Introduction	3
Exercises	5
References	6
2 Basic equations of the theory of acoustic waves in fluids	7
2.1 Number density, drift velocity, volume density of mass, and mass flow density of a collection of moving particles	7
Exercises	14
2.2 Conservation of the number of particles and its consequences	16
2.3 The equation of motion	20
2.4 The deformation rate equation	24
2.5 The constitutive relations	25
Exercises	28
2.6 The boundary conditions	29
2.7 Low-velocity linearisation: the equations of linear acoustics	31
2.8 Exchange of acoustic energy	37
Exercises	40
2.9 The frictional-force/bulk-viscosity acoustic loss mechanism	41
Exercises	43
2.10 Acoustic scalar and vector potentials in the theory of radiation from sources	44
Exercises	46
2.11 Point-source solutions; Green's functions	47
Exercises	48
2.12 SI units of acoustic wave quantities	49
Reference	50

3	The principle of superposition and its application to acoustic wave fields in configurations with geometrical symmetry	51
3.1	The principle of superposition	51
3.2	Symmetry with respect to a plane	52
	Exercises	57
3.3	Symmetry with respect to a line	58
	Exercises	62
3.4	Symmetry with respect to a point	63
	Exercises	67
4	The acoustic wave equations, constitutive relations, and boundary conditions in the time Laplace-transform domain (complex frequency domain)	69
4.1	The complex frequency-domain acoustic wave equations	70
	Exercises	71
4.2	The complex frequency-domain constitutive relations; the Kramers–Kronig causality relations for a fluid with relaxation	71
	Exercises	74
4.3	The complex frequency-domain boundary conditions	75
	Exercises	75
4.4	The complex frequency-domain coupled acoustic wave equations	76
4.5	Complex frequency-domain acoustic scalar and vector potentials	77
	Exercises	79
4.6	Complex frequency-domain point-source solutions and Green’s functions	80
	Exercises	81
	References	81
5	Acoustic radiation from sources in an unbounded, homogeneous, isotropic fluid	83
5.1	The coupled acoustic wave equations and their solution in the angular wave-vector domain	83
5.2	The Green’s function of the scalar Helmholtz equation	86
	Exercises	89
5.3	The complex frequency-domain source-type integral representations for the acoustic pressure and the particle velocity	89
	Exercises	93
5.4	The time-domain source-type integral representations for the acoustic pressure and the particle velocity in a lossless fluid	93
	Exercises	97
5.5	The Green’s function of the dissipative scalar wave equation	97
	Exercises	103
5.6	Time-domain source-type integral representations for the acoustic pressure and the particle velocity in a fluid with frictional-force/bulk-viscosity losses	104
5.7	The acoustic wave field emitted by a monopole transducer	106
5.8	The acoustic wave field emitted by a dipole transducer	111

Contents

5.9	Far-field radiation characteristics of extended sources (complex frequency-domain analysis)	116
5.10	Far-field radiation characteristics of extended sources (time-domain analysis for a lossless fluid)	119
	Exercises	122
5.11	The time evolution of an acoustic wave field. The initial-value problem (Cauchy problem) for a homogeneous, isotropic, lossless fluid	122
	Exercises	124
	References	125
6	Plane acoustic waves in homogeneous fluids	127
6.1	Plane waves in the complex frequency domain	127
	Exercises	130
6.2	Plane waves in lossless fluids; the slowness surface	130
	Exercises	132
6.3	Plane waves in the real frequency domain; attenuation vector and phase vector	133
	Exercises	139
6.4	Time-domain uniform plane waves in an isotropic, lossless fluid	140
	Exercises	142
6.5	Structure of the plane wave motion near the planar boundary of an acoustically impenetrable object	144
7	Acoustic reciprocity theorems and their applications	149
7.1	The nature of the reciprocity theorems and the scope of their consequences	149
	Exercises	156
7.2	The time-domain reciprocity theorem of the time convolution type	157
	Exercises	160
7.3	The time-domain reciprocity theorem of the time correlation type	160
	Exercises	164
7.4	The complex frequency-domain reciprocity theorem of the time convolution type	164
	Exercises	167
7.5	The complex frequency-domain reciprocity theorem of the time correlation type	169
	Exercises	172
7.6	Transmission/reception reciprocity properties of a pair of acoustic transducers	173
	Exercises	176
7.7	Transmission/reception reciprocity properties of a single acoustic transducer	177
7.8	The direct (forward) source problem; point-source solutions and Green's functions	181
	Exercises	189
7.9	The direct (forward) scattering problem	193
7.10	The inverse source problem	199

7.11	The inverse scattering problem	205
7.12	Acoustic wave-field representations in a subdomain of the configuration space; equivalent surface sources; Huygens' principle and the Ewald–Oseen extinction theorem	212
	Exercises	219
	References	220
8	Plane wave scattering by an object in an unbounded, homogeneous, isotropic, lossless embedding	221
8.1	The scattering configuration, the incident plane wave and the far-field scattering amplitudes	221
	Exercises	230
8.2	Far-field scattered wave amplitude reciprocity of the time convolution type	231
	Exercises	239
8.3	Far-field scattered wave amplitude reciprocity of the time correlation type	240
	Exercises	249
8.4	An energy theorem about the far-field forward scattered wave amplitude .	249
	Exercises	253
8.5	The Neumann expansion in the integral equation formulation of the scattering by a penetrable object	254
8.6	Far-field plane wave scattering in the first-order Rayleigh–Gans–Born approximation; time-domain analysis and complex frequency-domain analysis for canonical geometries of the scattering object	259
	Exercises	278
	References	285
 Part 2 Radiation and scattering of elastic waves in solids		
9	Introduction	289
	Exercises	291
	References	291
10	Basic equations of the theory of elastic waves in solids	293
10.1	Number density, drift velocity, volume density of mass, and mass flow density of a collection of moving particles	293
	Exercises	300
10.2	Conservation of the number of particles and its consequences	302
10.3	The equation of motion	305
	Exercises	312
10.4	The deformation equation	313
	Exercises	315
10.5	The constitutive relations	315
	Exercises	321
10.6	The boundary conditions	322
10.7	Low-velocity linearisation; the equations of linear elastodynamics	325

Contents

Exercises	329
10.8 Exchange of elastodynamic energy	330
Exercises	333
10.9 The frictional-force/viscosity elastodynamic loss mechanism	334
Exercises	336
10.10 Elastodynamic vector and tensor potentials in the theory of radiation from distributed sources	337
Exercises	339
10.11 Point-source solutions; Green’s functions	340
Exercises	341
10.12 The elastodynamic wave equation for the particle velocity in a lossless solid	341
10.13 The equivalent fluid model for dilatational waves in a solid	343
Exercises	346
10.14 SI units of elastic wave quantities	347
References	348
11 The principle of superposition and its application to elastic wave fields in configurations with geometrical symmetry	349
11.1 The principle of superposition	349
11.2 Symmetry with respect to a plane	350
Exercises	356
11.3 Symmetry with respect to a line	356
Exercises	361
11.4 Symmetry with respect to a point	361
Exercises	365
12 The elastic wave equations, constitutive relations, and boundary conditions in the time Laplace-transform domain (complex frequency domain)	367
12.1 The complex frequency-domain elastic wave equations	368
Exercises	369
12.2 The complex frequency-domain constitutive relations; the Kramers–Kronig causality relations for a solid with relaxation	369
12.3 The complex frequency-domain boundary conditions	372
Exercises	373
12.4 The complex frequency-domain coupled elastic wave equations	373
12.5 Complex frequency-domain elastodynamic vector and tensor potentials	374
Exercises	376
12.6 Complex frequency-domain point-source solutions; complex frequency-domain Green’s functions	376
Exercises	377
12.7 The complex frequency-domain elastic wave equations for dilatational waves (equivalent fluid model)	378
Exercises	380
References	380

13	Elastodynamic radiation from sources in an unbounded, homogeneous, isotropic solid	381
13.1	The coupled elastic wave equations in the angular wave-vector domain	381
13.2	The elastodynamic wave equation for the particle velocity and its solution in the angular wave-vector domain	384
13.3	Determination of G_P and G_S	385
	Exercises	389
13.4	The complex frequency-domain source-type integral representations for the particle velocity and the dynamic stress	389
	Exercises	393
13.5	The time-domain source-type integral representations for the particle velocity and the dynamic stress	394
13.6	Point-source solutions	396
13.7	Far-field radiation characteristics of extended sources (complex frequency-domain analysis)	398
	Exercises	403
13.8	Far-field radiation characteristics of extended sources (time-domain analysis)	403
	Exercises	407
13.9	The time evolution of an elastic wave field. The initial-value problem (Cauchy problem) for a homogeneous, isotropic, perfectly elastic solid	407
	Exercises	410
14	Plane elastic waves in homogeneous solids	413
14.1	Plane waves in the complex frequency domain	413
	Exercises	416
14.2	Plane waves in lossless solids; the slowness surface	416
	Exercises	419
14.3	Plane waves in the real frequency domain; attenuation vector and phase vector	420
	Exercises	422
14.4	Time-domain uniform plane waves in an isotropic, lossless solid	423
	Exercises	426
15	Elastodynamic reciprocity theorems and their applications	429
15.1	The nature of the reciprocity theorems and the scope of their consequences	429
	Exercises	436
15.2	The time-domain reciprocity theorem of the time convolution type	437
	Exercises	440
15.3	The time-domain reciprocity theorem of the time correlation type	441
	Exercises	444
15.4	The complex frequency-domain reciprocity theorem of the time convolution type	445

Contents

	Exercises	449
15.5	The complex frequency-domain reciprocity theorem of the time correlation type	450
	Exercises	453
15.6	Transmission/reception reciprocity properties of a pair of elastodynamic transducers	455
	Exercises	458
15.7	Transmission/reception reciprocity properties of a single elastodynamic transducer	459
15.8	The direct (forward) source problem. Point-source solutions and Green's functions	463
	Exercises	471
15.9	The direct (forward) scattering problem	475
15.10	The inverse source problem	481
15.11	The inverse scattering problem	487
15.12	Elastic wave-field representations in a subdomain of the configuration space; equivalent surface sources; Huygens' principle and the Ewald–Oseen extinction theorem	494
	Exercises	501
	References	503
16	Plane wave scattering by an object in an unbounded, homogeneous, isotropic, lossless embedding	505
16.1	The scattering configuration, the incident plane waves and the far-field scattering amplitudes	505
	Exercises	516
16.2	Far-field scattered wave amplitudes reciprocity of the time convolution type	517
	Exercises	533
16.3	Far-field scattered wave amplitudes reciprocity of the time correlation type	534
16.4	An energy theorem about the far-field forward scattered wave amplitudes	551
	Exercises	559
16.5	The Neumann expansion in the integral equation formulation of the scattering by a penetrable object	560
16.6	Far-field plane wave scattering in the first-order Rayleigh–Gans–Born approximation; time-domain analysis and complex frequency-domain analysis for canonical geometries of the scattering object	565
	Exercises	591
	References	597
Part 3 Radiation and scattering of electromagnetic waves		
17	Introduction	601
	Exercises	604
	References	604

18	The electromagnetic field equations	605
18.1	Force exerted on an electric point charge	605
	Exercises	607
18.2	The electromagnetic field equations in vacuum	608
	Exercises	609
18.3	The electromagnetic field equations in matter	610
	Exercises	613
18.4	The electromagnetic field equations for time-independent fields (quasi-static field equations)	613
	Exercises	614
18.5	SI units of the electromagnetic field quantities	615
	References	616
19	The electromagnetic constitutive relations	617
19.1	Conductivity, permittivity and permeability of an isotropic material	618
19.2	Conductivity, permittivity and permeability of an anisotropic material	619
19.3	Conductivity, permittivity and permeability of a material with relaxation	620
	Exercises	621
19.4	Electric current as a flow of electrically charged particles. The conservation of electric charge	622
	Exercises	629
19.5	The conduction relaxation function of a metal	632
	Exercises	639
19.6	The conduction relaxation function of an electron plasma	639
	Exercises	641
19.7	The dielectric relaxation function of an isotropic dielectric	642
	Exercises	643
19.8	SI units of the quantities associated with the electromagnetic constitutive behaviour of matter	644
	References	645
20	The electromagnetic boundary conditions	647
20.1	Boundary conditions at the interface of two media	647
	Exercises	649
20.2	Boundary condition at the surface of an electrically impenetrable object	650
	Exercises	650
20.3	Boundary condition at the surface of a magnetically impenetrable object	651
	Exercises	651
21	Exchange of energy in the electromagnetic field	653
21.1	Energy theorem for the electromagnetic field associated with the flow of a collection of electrically charged particles	653
21.2	Energy theorem for the electromagnetic field in stationary matter	657
21.3	Energy theorem for the electromagnetic field in a medium with conductivity, permittivity and permeability	661

Contents

21.4	Exercises	663
21.4	SI units of the quantities associated with the exchange of electromagnetic energy	666
22	Vector potentials, point-source solutions and Green's functions in the theory of electromagnetic radiation from sources	667
22.1	Vector potentials in the theory of electromagnetic radiation from distributed sources	667
	Exercises	669
22.2	Point-source solutions; Green's functions	670
	Exercises	671
23	The principle of superposition and its application to electromagnetic fields in configurations with geometrical symmetry	673
23.1	The principle of superposition	673
23.2	Symmetry with respect to a plane	674
	Exercises	680
23.3	Symmetry with respect to a line	681
	Exercises	685
23.4	Symmetry with respect to a point	686
	Exercises	690
24	The electromagnetic field equations, constitutive relations and boundary conditions in the time Laplace-transform domain (complex frequency domain)	693
24.1	The complex frequency-domain electromagnetic field equations	694
	Exercises	695
24.2	The complex frequency-domain electromagnetic constitutive relations; Kramers–Kronig causality relations for a medium with relaxation	695
	Exercises	706
24.3	The complex frequency-domain boundary conditions	710
	Exercises	711
24.4	The complex frequency-domain coupled electromagnetic wave equations	711
	Exercises	712
	References	714
25	Complex frequency-domain vector potentials, point-source solutions and Green's functions in the theory of electromagnetic radiation from sources	715
25.1	Complex frequency-domain vector potentials in the theory of electromagnetic radiation from distributed sources	715
	Exercises	717
25.2	Complex frequency-domain point-source solutions; complex frequency-domain Green's functions	717
	Exercises	718

26	Electromagnetic radiation from sources in an unbounded, homogeneous, isotropic medium	719
26.1	The electromagnetic field equations and their solution in the angular wave-vector domain	719
26.2	The Green's function of the scalar Helmholtz equation	723
	Exercises	726
26.3	The complex frequency-domain source-type representations for the electric and the magnetic field strengths	726
	Exercises	729
26.4	The time-domain source-type representations for the electric and the magnetic field strengths in a lossless medium	730
	Exercises	733
26.5	The Green's function of the dissipative scalar wave equation	734
	Exercises	740
26.6	Time-domain source-type integral representations for the electric and the magnetic field strengths in a medium with conductive electric and linear hysteresis magnetic losses	740
26.7	The Green's function of the scalar wave equation associated with plasma oscillations and superconductivity	743
26.8	Time-domain source-type integral representations for the electric and the magnetic field strengths in an electron plasma or a superconducting metal	749
26.9	The electromagnetic field emitted by a short segment of a thin, conducting, current-carrying wire	752
26.10	The electromagnetic field emitted by small, conducting, current-carrying loop	757
	Exercises	762
26.11	Far-field radiation characteristics of extended sources (complex frequency-domain analysis)	762
	Exercises	765
26.12	Far-field radiation characteristics of extended sources (time-domain analysis for a lossless medium)	765
	Exercises	768
26.13	The time evolution of an electromagnetic wave field. The initial-value problem (Cauchy problem) for a homogeneous, isotropic, lossless medium	768
	Exercises	770
	References	771
27	Plane electromagnetic waves in homogeneous media	773
27.1	Plane waves in the complex frequency domain	773
	Exercises	778
27.2	Plane waves in lossless media; the slowness surface	780
	Exercises	782
27.3	Plane waves in the real frequency domain; attenuation vector and phase vector	782
	Exercises	800
27.4	Time-domain uniform plane waves in an isotropic, lossless medium	802

Exercises	805
28 Electromagnetic reciprocity theorems and their applications	807
28.1 The nature of the reciprocity theorems and the scope of their consequences	807
Exercises	814
28.2 The time-domain reciprocity theorem of the time convolution type	814
Exercises	817
28.3 The time-domain reciprocity theorem of the time correlation type	818
Exercises	822
28.4 The complex frequency-domain reciprocity theorem of the time convolution type	822
Exercises	826
28.5 The complex frequency-domain reciprocity theorem of the time correlation type	827
Exercises	830
28.6 Transmission/reception reciprocity properties of a pair of electromagnetic antennas	832
Exercises	836
28.7 Transmission/reception reciprocity properties of a single electromagnetic antenna	837
28.8 The direct (forward) source problem. Point-source solutions and Green's functions	840
Exercises	848
28.9 The direct (forward) scattering problem	851
28.10 The inverse source problem	857
28.11 The inverse scattering problem	863
28.12 Electromagnetic wave-field representations in a subdomain of the configuration space; equivalent surface sources; Huygens' principle and the Ewald–Oseen extinction theorem	870
Exercises	877
References	878
29 Plane wave scattering by an object in an unbounded, homogeneous, isotropic, lossless embedding	879
29.1 The scattering configuration, the incident plane wave and the far-field scattering amplitudes	879
Exercises	887
29.2 Far-field scattered wave amplitude reciprocity of the time convolution type	888
Exercises	896
29.3 Far-field scattered wave amplitude reciprocity of the time correlation type	897
Exercises	906
29.4 An energy theorem about the far-field forward scattered wave amplitude	906
Exercises	910

29.5 The Neumann expansion in the integral equation formulation of the scattering by a penetrable object 911

29.6 Far-field plane wave scattering in the first-order Rayleigh–Gans–Born approximation; time-domain analysis and complex frequency-domain analysis for canonical geometries of the scattering object 915

 Exercises 935
